Experiment 8: Online Learning Platform with Kano Model Prioritization in Jira

Course code: CSA1006

Course: Software Engineering

Name: B. Pavani

Register No: 192525248

Tool Used: Jira

Aim

To create an Online Learning Platform project in Jira, add its main features as tasks, and prioritize them using the Kano model (Must-be, Performance and Attractive).

Software Used

Jira Software (free plan), https://www.atlassian.com/software/jira

Concept of the Kano Model

The Kano model groups features by how they affect user satisfaction.

- Must-be: Basic features that users expect. The product is not acceptable without them, but having them does not delight users.
- Performance: Features where better quality gives proportionally higher satisfaction.
- Attractive: Unexpected extra features that delight users. Users do not complain if they are missing.

Procedure

Step 1: Log in to Jira

Open https://www.atlassian.com/software/jira in a browser and log in with your Atlassian account.

Step 2: Create the project

Click "Create" and choose "Space" (project), select the Scrum template and click "Use template". Enter the project name "Exp-8 Online Learning Platform" and the project key "OLP8", then click "Create".

Step 3: Add the tasks to the backlog

Open the "Backlog" tab, click "+ Create" and type each task name, then press Enter. Add the six main features of the online learning platform listed in the table below. Jira numbers them OLP8-1 to OLP8-6. All the tasks are in the Backlog with the status To Do.

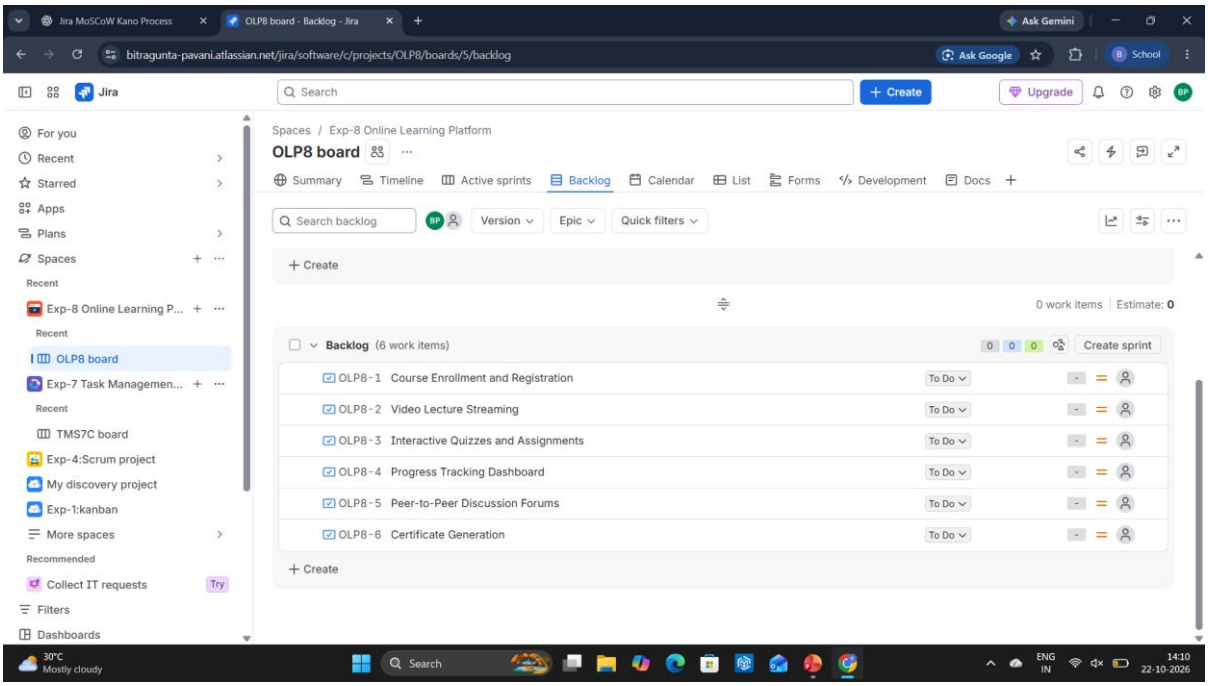

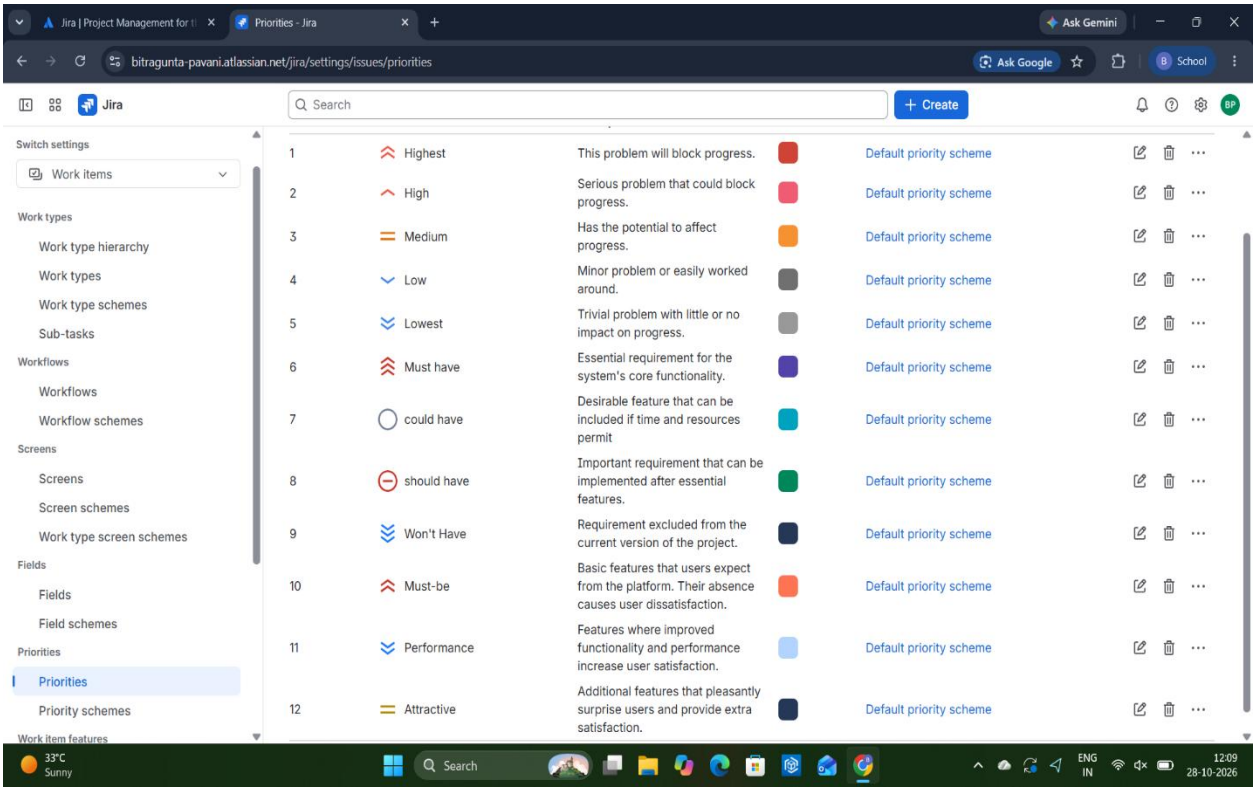

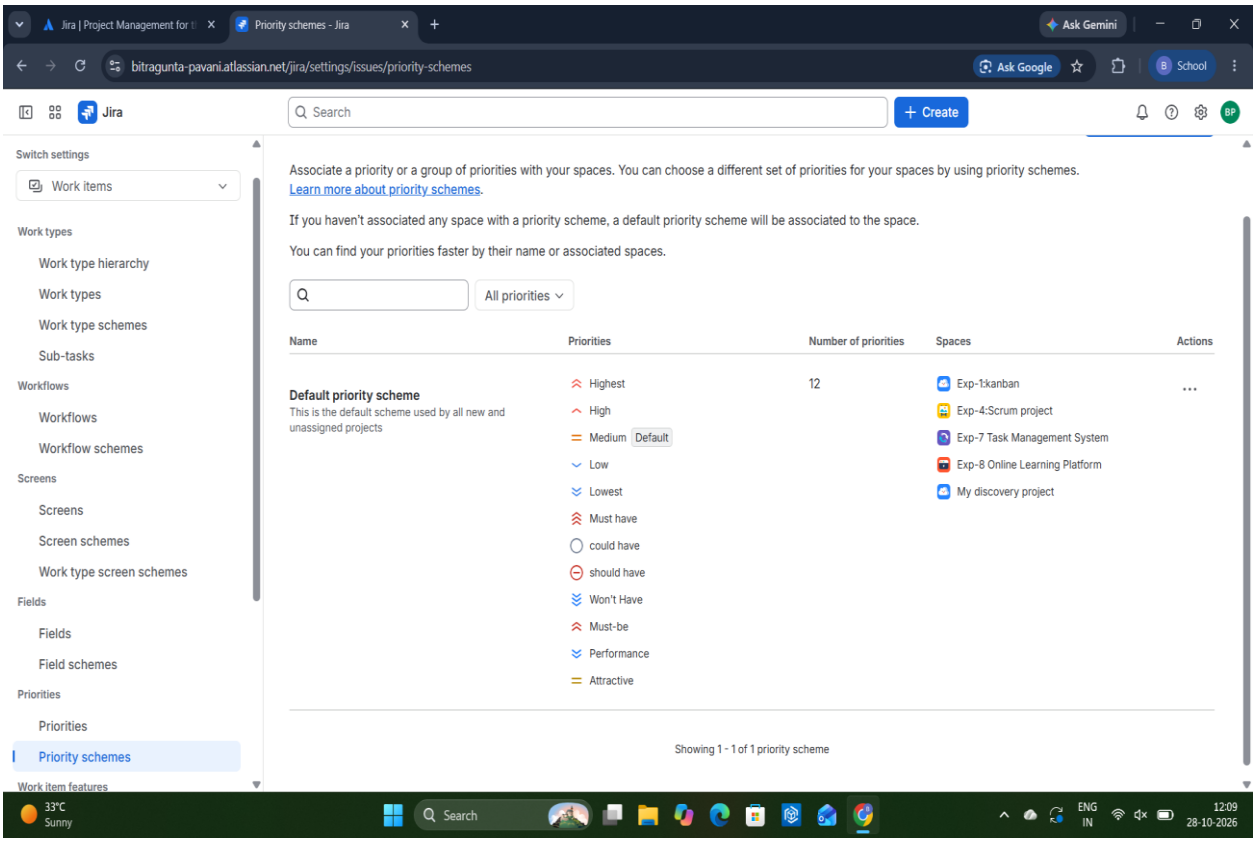

Figure 1: Backlog view with the six tasks of the Online Learning Platform

Issue	Task Name	Kano category	Status
OLP8-1	Course Enrollment and Registration	Must-be	To Do
OLP8-2	Video Lecture Streaming	Must-be	To Do
OLP8-3	Interactive Quizzes and Assignments	Attractive	To Do
OLP8-4	Progress Tracking Dashboard	Performance	To Do
OLP8-5	Peer-to-Peer Discussion Forums	Performance	To Do
OLP8-6	Certificate Generation	Attractive	To Do

Step 4: Check the default priority

Open the "List" tab. Jira shows the default priority "Medium" for every task, because the Kano categories have not been assigned yet.

Work item features
1 Highest This problem will block progress. Default priority scheme
2 High Serious problem that could block progress. Default priority scheme
3 Medium Has the potential to affect progress. Default priority scheme
4 Low Minor problem or easily worked around. Default priority scheme
5 Lowest Trivial problem with little or no impact on progress. Default priority scheme
6 Must have Essential requirement for the system's core functionality. Default priority scheme
7 could have Desirable feature that can be included if time and resources permit Default priority scheme
8 should have Important requirement that can be implemented after essential features. Default priority scheme
9 Won't Have Requirement excluded from the current version of the project. Default priority scheme
10 Must-be Basic features that users expect from the platform. Their absence causes user dissatisfaction. Default priority scheme
11 Performance Features where improved functionality and performance increase user satisfaction. Default priority scheme
12 Attractive Additional features that pleasantly surprise users and provide extra satisfaction. Default priority scheme

Associate a priority or a group of priorities with your spaces. You can choose a different set of priorities for your spaces by using priority schemes.
Learn more about priority schemes.
If you haven't associated any space with a priority scheme, a default priority scheme will be associated to the space.
You can find your priorities faster by their name or associated spaces.

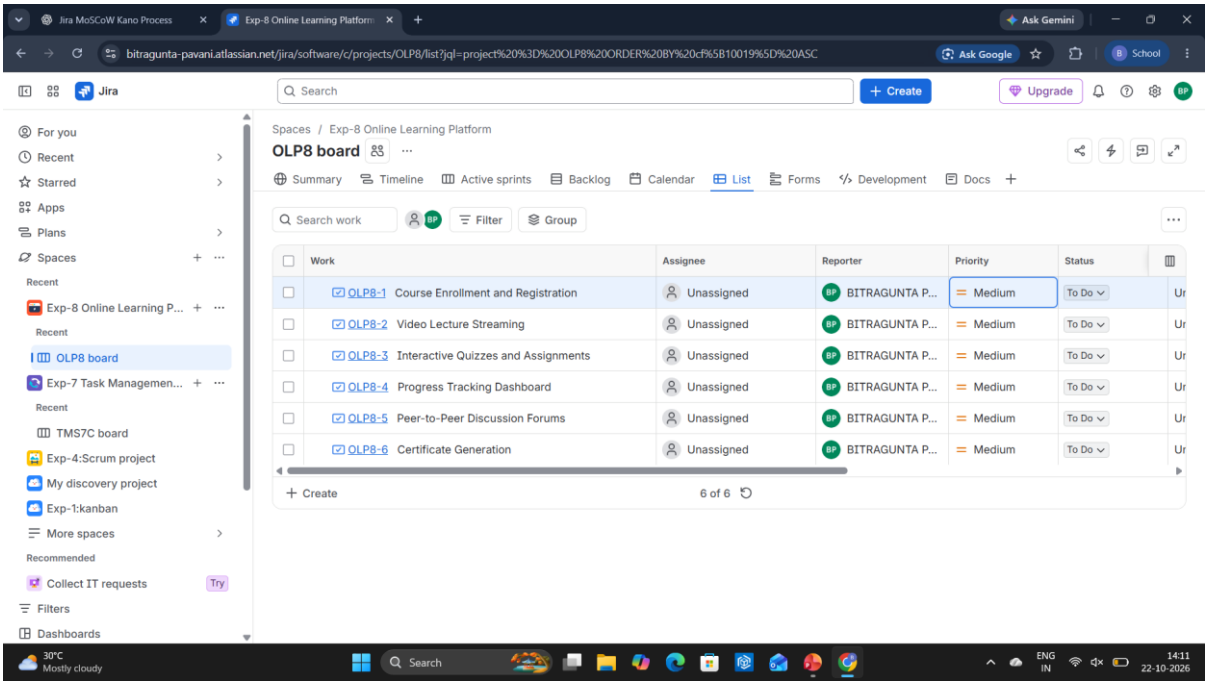

Figure 2: List view with the default Medium priority for all tasks

Step 5: Set the Kano categories as priorities

Open Settings, go to Work items and then Priorities, and set the priority names Must-be, Performance and Attractive. Then click the Priority column of each task in the List view and select its Kano category.

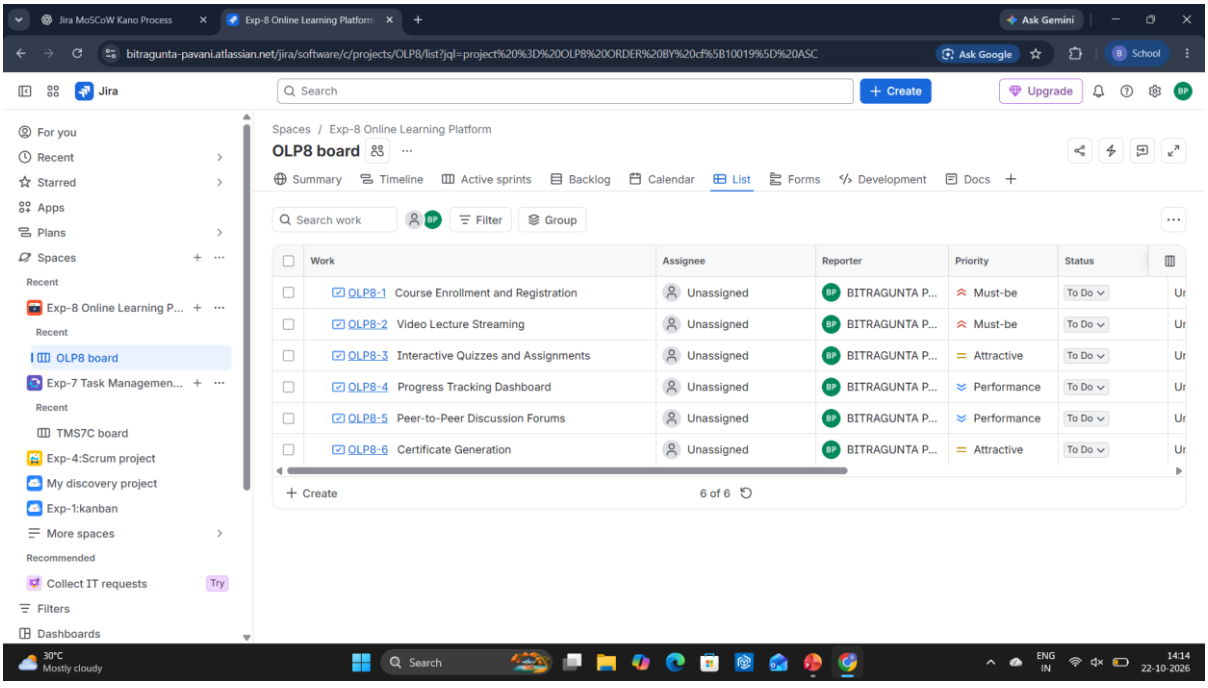

Figure 3: List view with the Kano categories assigned as priorities

Reason for the Categories

Task	Category	Reason

Course Enrollment and Registration	Must-be	Learners cannot use the platform without enrolling in courses.
Video Lecture Streaming	Must-be	Delivering lectures is the basic purpose of an online learning platform.
Interactive Quizzes and Assignments	Attractive	Makes learning more engaging, and learners do not expect it as a basic feature.
Progress Tracking Dashboard	Performance	The better the tracking, the more satisfied learners are.
Peer-to-Peer Discussion Forums	Performance	Better discussion support increases learner satisfaction.
Certificate Generation	Attractive	A pleasant extra that rewards learners for completing a course.

Category Summary

Kano category	**Tasks**	**Number of tasks**
Must-be	OLP8-1, OLP8-2	2
Performance	OLP8-4, OLP8-5	2
Attractive	OLP8-3, OLP8-6	2
Total		6

Result

An Online Learning Platform project was created in Jira. Six main features were added as tasks and prioritized using the Kano model: two Must-be, two Performance and two Attractive features. The Kano categories appear in the Priority column of the List view.
