EXPERIMENT NO 3

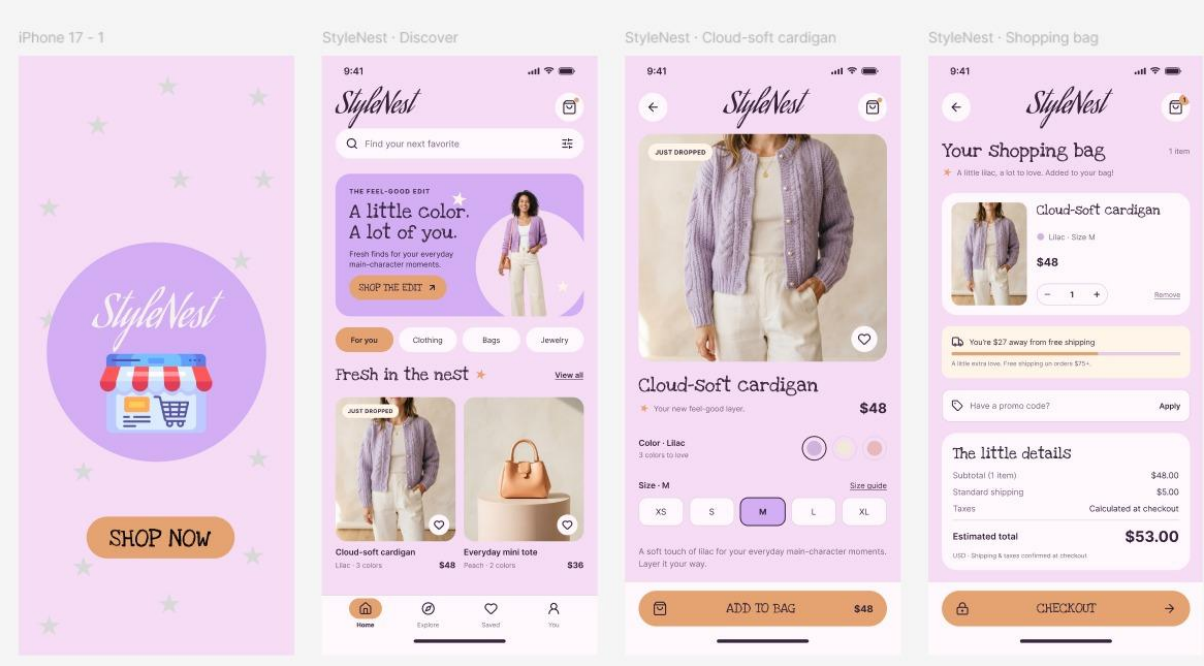

The stakeholders have conflicting views on the user interface design for an E-Commerce mobile app. Create a prototype using Figma tool to discuss with the stakeholders to get their feedback and approval.

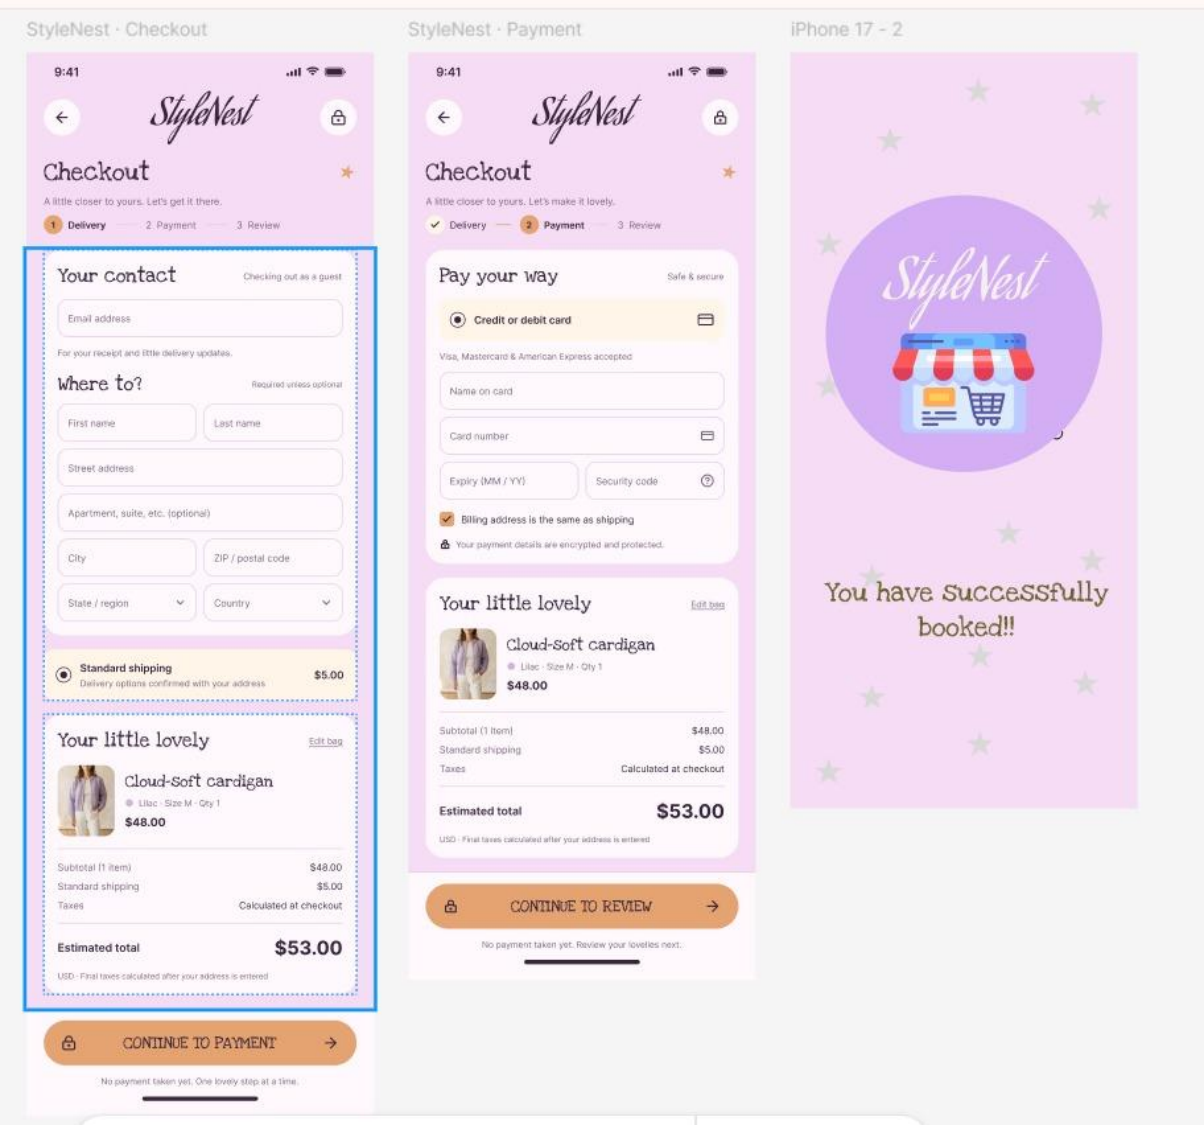

Aim

To create an interactive prototype of an E-Commerce mobile application using the Figma tool and present it to stakeholders to collect feedback, resolve conflicting UI design preferences, and obtain approval.

Procedure

1. Open the Figma tool and create a new design file.
2. Create mobile app screens such as Login, Home, Product Listing, Product Details, Shopping Cart, and Checkout.
3. Design the user interface with suitable colours, fonts, buttons, icons, and product images.
4. Create multiple design variations to address the different preferences of stakeholders.
5. Connect the screens using Figma's Prototype mode to enable interactive navigation.
6. Share the prototype link with stakeholders for review and discussion.
7. Collect feedback, compare suggestions, make necessary changes, and finalize the UI design based on stakeholder approval.

Result

An interactive E-Commerce mobile app prototype was successfully created using Figma. Stakeholder feedback was collected to resolve UI design conflicts, and the design was refined to improve usability and achieve a mutually approved interface.
